

SECTION A

QUESTION 1

(1) B

(2) D

(3) B

(4) C

(5) C

(6) B

(7) C

(8) B

(9) C

(10) E

SECTION B

(11) TRUE

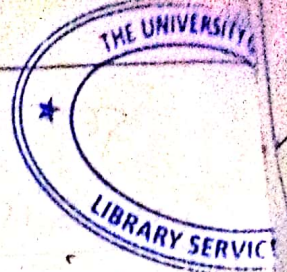

(12) FALSE

(13) FALSE

(14) FALSE

(15) FALSE

SECTION C

18 To mention at least four (4) types of Probability sampling
→

(i) Simple Random sampling: In this type each individual or item in a population has an equal chance of being selected as a sample

(ii) Stratified sampling: In this type individuals or items are grouped based on their characteristics, and from each group (strata), the items or individuals are selected randomly

(iii) Systematic sampling: In this type individuals or items are selected systematically at a certain regular interval from the population (i.e. at n^{th} interval)

(iv) Cluster sampling: In this type items or individuals are grouped into clusters, and then one cluster is selected randomly to represent the others

19 To List 3 common types of medical research used in health

(i) Epidemiological research

(ii) Clinical trials research

(iii) Basic laboratory experiments research

12

17 To outline necessary steps in formulating research problem

(i) Topic identification

(ii) Reviewing literatures / literature review

(iii) Narrowing down the topic

(iv) Formulating research ~~problem~~ question or hypothesis

(v) Formulating research design or methodology

- (vi) Refining the research methodology
- (vii) finalizing
- (viii) Proposal writing

10

Differences between data collection methods in qualitative research and data collection methods in quantitative research

- (i) Data collection methods in qualitative research are subjective while data collection methods in quantitative research are objective.
- (ii) Data collection methods in qualitative research aim in non numeric data while data collection methods in quantitative research aim in numeric data.
- (iii) Data collection methods in qualitative research asks questions like how, what and why to explore more information from participants while data collection methods in quantitative research include questions like how much, how many, to what extent to get specific answer (numeric answer).
- (iv) Qualitative data collection methods include/use open ended questions mostly while Quantitative data collection methods prefer closed ended questions.
- (v) Qualitative data collection methods include observation, focus group discussion and interviews, while Quantitative data collection methods include survey/questionnaires and experiments.

SECTION C

Research topic

Effects of social media on student performance

Main objective

To evaluate/investigate the effects (both positive and negative) of social media on student performance

Specific objectives

- (i) To identify to what extent do students use social media during the time of studying
- (ii) To identify to what extent do the social media help students in solving academic questions or problems
- (iii) To identify performance difference when they are not using social media and when they use the social media during the time of studying.
